Utica, N. Y. March 21st 85.

Dear Sir; Did you receive the botanical specimens (from Nevada) that I sent you some time ago? If so have you made out with them, or have you not had time to look at them? I have about as many more that I would be glad to have named, if you would wish to attend to them. Do you find any duplicates among them? Is there any botanical work extant that covers the region of S. Nevada & California? Truly Yours - J. A. Burdick.

Dr. Rev. Engelmann—

Dear Sir: I send you today by mail some Specimens of Leek which I wish you would examine Several years since I found growing on the banks of a lake marsh a dark that seemed to be diffrent from the common, or common form of Allium Tricoccum. The leaves instead of being flaccous were bright-green and shining. The petioles and scape are purple instead of white as in the common form. The petioles are also longer— raising the leaf more above

(purple)

the ground. Then this form seems always to prefer the clay soil of the bank to the rich soil of the bottom. I find the two forms growing pretty close together sometimes, but the common form grows near the foot of the bank in the richer soil. I have never found the purple form elsewhere than in the clay soil of a bank near a lake. The other form is very abundant everywhere in rich woods and prairie grounds.

The two forms seem never to run together but, so far as I can see, are perfectly distinct. I shall secure some flowering specimens if possible. Did you receive a card from me some time since asking

you to send me the names
of such of my Nevada specimens
as you had identified?
If you will send the names
I will write such of them marked as
you wish to retain & shall
be glad to have you do so. Please
give the number with each name.

Yours truly—

A. Burdick

Dr. Geo. Engelmann- Dear Sir. Your
list of names of the new additions
I sent is at hand, I shall be glad
to have you retain the ones you
have marked. I shall send you
the remainder of the new species
names, not yet named, in a few days
if I can get the time. If you can make
room for such of them you now have as you
do not wish to keep, mark your list and I will ask you to send me the
whole lot, perhaps. I will ask you to send me the
whole lot together, after your selections. Truly- J. M. Burdick

Utica, N.Y. July 8-81.

Dear Doctor, The list of names of specimens you sent me was received several days ago and should have been acknowledged sooner. The El Dorado Canon is on the Colorado River 90 miles below Callville, which I think you will find on the maps. I have not yet looked over the plants carefully enough to detect your 4 or 5 species you have marked, from Mrs. L. F. Sandrick

Dear Doctor: Have you got my Nevada plants all named yet? I believe you did not give names for the following Nos: 3. 4. 5. 6. 7. 8. 9. 10. 12. 14. 15. 16. 17. 18. 23. 24. 25. 26. 27. 28. 30. 31. 41. 42. 43. 44. 45. 47. 50. 52. 53. 56. 57. 64. 65. 67. 68. 69. 70. 71. 76. 100. 104. 109. 111. 113. 150. 83. 46. 115. 40.

I have run over this list hastily and may have made some mistakes.

Fully Yours

Utica N.Y. May 1 - '82

Dear Sir: If there should be any of the Nevada plants that you do not wish to keep I will pay the postage if you will kindly return them

I wish to call your attention already to what I consider a variety of Allium Bivalve of not a distinct species

It is found sparingly in the clayey tracts bordering lakes in this vicinity - Notably L. Keuka & Seneca. Scapes always only two, lance elliptic, bright green and shining (never glaucous) narrowed below into a distinct petiole which is deep purple. always. Will send specimens if possible

Yours truly
